### Amendments to the Claims

This listing of the claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims:

- 1           1.       (currently amended) A system for storing and retrieving data, comprising:  
2           an identifier including three or more variables for identifying each data stored in said  
3       system, wherein one of said at least three or more variables is a location variable.
- 1           2.       (original) The system of claim 1, wherein one of said three or more variables is a  
2       device identification variable.
- 1           3.       (original) The system of claim 2, further includes a timestamp for prioritizing said  
2       data.
- 1           4.       (original) The system of claim 3, wherein one of said variables may be filled by a  
2       wildcard.
- 1           5.       (original) The system of claim 4, wherein said system includes a registry for  
2       storing said data.
- 1           6.       (original) The system of claim 5, wherein said registry is provided in a database  
2       structure.
- 1           7.       (original) The system of claim 1, wherein said three or more variables includes a  
2       device identification variable, an application identification variable and a user identification  
3       variable.
- 1           8.       (original) The system of claim 7, further including a timestamp for prioritizing  
2       data.

1           9.       (original) The system of claim 8, wherein one of said variables may be filled by a  
2 wildcard.

1           10.      (original) The system of claim 9, wherein said system includes a registry and said  
2 registry includes a database structure for storing said data.

1           11.      (currently amended) A registry for storing and retrieving preference data,  
2 comprising:  
3           an identifier including at least three variables for identifying a data stored in said registry,  
4 wherein one of said at least three or more variables is a location variable.

1           12.      (original) The registry of claim 11, further comprising a means for providing a  
2 floating value to said at least three variables.

1           13.      (original) The registry means of claim 12, further comprising a means for  
2 associating a time stamp to said data.

1           14.      (currently amended) A method for storing and retrieving data in a system,  
2 comprising the step of:  
3           identifying each stored data in said system by an identifier including three or more  
4 variables, wherein one of said at least three or more variables is a location variable.

1           15.      (original) A method according to claim 14, further comprising the step of storing  
2 data in a registry.

1           16.      (original) A method according to claim 15, wherein one of said three or more  
2 variables is a device identification variable.

1           17.      (original) A method according to claim 16, further including the step of time  
2 stamping said data for prioritizing said data.

1           18.     (original) A method according to claim 17, further including the step of  
2     filling one of said variables with a wildcard.

1           19.     (original) A method according to claim 18, further including the step of  
2     deleting one or more data items that has been superseded by a subsequent data having  
3     same identifier but a higher time stamp value.

1           20.     (original) A method according to claim 19, wherein said registry is  
2     provided in a database structure.

1           21.     (new) A system for storing and retrieving data as in claim 1 wherein said  
2     location comprised the locating a device.
